ABSTRACT

This report on transiency and stability in the Los Angeles Unified School District continues a series that has been augmented annually since 1968-69. Transiency refers to the adjusted numbers of entrants and leavers, expressed as a percentage (rate); stability refers to the student population that has remained in the school all year, expressed as a percentage (rate) of the starting enrollment. Information on the number of students who entered and left each month was gathered from all regular and magnet schools. Rankings were computed for elementary, secondary, and magnet schools by administrative region, with a district summary. Transiency rates reported in this study cannot be directly compared to previous years because a new formula was used to compute transiency. Overall, the stability rate declined from 1978-79 to 1980-81, from 76.6 percent to 74.1 percent, with noteworthy improvements over the next two years. The overall transiency rate for 1982-83, 39.1 percent, can be used as a baseline for comparing future rates. Historical data are reported for 1968-1978 and 1978-1982. Statistical data are included on seven tables. (FMW)

ABSTRACT

This transiency and stability report for the Los Angeles Unified School District, 1982-83, continues the series that has been augmented annually for over a decade.

Transiency refers to the adjusted number of entrants and leavers, and is expressed as a percentage ("rate"). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage ("rate") of the starting enrollment.

In this report, please observe that the transiency formula is new. Transiency rates shown, therefore, cannot be directly compared with previous years' rates.

Information has again been gathered from all regular and magnet schools relating to the number of students who entered and left each month. Rankings were computed for elementary, secondary, and magnet schools by a administrative region, with a district summary.

Fluctuations in annual rates may reflect more than ordinary entering and leaving. For instance, in recent years, attendance patterns had to be reconfigured because of magnet and busing programs. As noted in Findings, overall stability rates have risen in the last several years, after a low in 1980-81:

School Year	Stability Rate
1978-79	76.64%
1979-80	75.46%
1980-81	74.11%
1981-82	74.98%
1982-83	76.68%

BACKGROUND

Since 1968-69, the Research and Evaluation Branch has published an annual report entitled "Transiency Rates in Los Angeles City Schools," which presents student transiency activity in relation to school enrollment. The resulting transiency percentage of the school's average enrollment at times exceeded 100% because some students were counted twice, as both entrants and leavers. To provide a more accurate understanding of school stability, three new indices, entitled "School-Year Transiency Equivalence Rate," "12-Month Transiency Equivalence Rate," and "School-Year Enrollment Stability Rate," were added to the report beginning in 1974-75, covering transiency and stability.

Since transiency and stability are not reciprocal concepts, the sum of their rates does not necessarily equal 100%. Each concept is computed separately, although some counts of students are shared.

In the 1977-78 publication, historical rates were adjusted for 1968-69 through 1977-78. In adjusting the old transiency rates, three sources of variance were handled as follows: (a) accumulated average enrollment was rounded; (b) source data were corrected; and (c) any school was excluded that did not have both 1st and 6th school month enrollment data.

Beginning in 1978-79 and continuing in this report, several other changes have been incorporated: (a) data are presented for each magnet program as well as each elementary, junior high, and senior high school; and (b) transiency and stability rates were calculated for the 10-month school year only (12-month computations were discontinued).

In the 1982-83 report, as last year, magnet programs include schools and centers as well as alternative schools. Year-round schools are again listed with the regular schools.

Not included in this survey are data for continuation and opportunity high schools, community adult schools, skills centers, and schools for the handicapped.

It is important to note that in this report the formula for computing transiency has been changed. To improve and further refine the transiency concept, all enterers (E) and leavers (L) for the first school month have been eliminated from consideration. Statistics will be based on the 2nd through the 10th school month. The categories of E1, L1, and L7 are not used in calculations, although they were in previous reports.

DEFINITIONS

For purposes of this report, the following definitions were used:

Transiency refers to the adjusted number of entrants and leavers for the year, and is expressed as a percentage ("rate") of 1st plus 6th school-month enrollments averaged. See the formula.

Stability approximates the student population that has remained in the school during the school year. It is computed by subtracting all school-year leavers from the starting enrollment, and is expressed as a percentage ("rate") of the starting enrollment.

Entrants are students entering during the school year, with three exceptions: (a) those returning to the same school at the beginning of the school year; (b) those entering a different school as part of the normal articulation, such as promotion from elementary school to junior high school; and (c) those entering school for the first time, as in kindergarten. Categories of entering students included in this survey are the same as those on the statistical reports for the Pupil Statistics and Reports Section:

E2 entering from another school within the district

E3 entering a district school from another California public school

E4 entering a district school from a nonpublic school in California

E5 entering a district school from another state of the United States or out of the United States

E7 first-time school enrollment (generally kindergarten or 1st grade)

Leavers are students leaving at any time during the school year, except as a result of graduation from 6th, 9th, and 12th grades, or those leaving one grade or program to enter another in the same school (L1). Categories of leaving students are as follows:

L2 leaving one district school for another

L3 leaving a district school for another public school in California

L4 leaving a district school for a nonpublic school in California

L5 leaving a district school for a school in another state of the United States or out of the United States

L8 leaving a district school for an unknown reason or to "drop out" of school

Magnet Programs are part of the district's voluntary integration program. Magnet schools and centers (which include the four alternative schools) are open to all LAUSD students, grades K-12. A program may include the entire student body at a school or selected grades. Each program emphasizes a particular field of interest such as science, language, multicultural studies, performing and fine arts, business, and the basics of reading, writing, and mathematics. Gifted and high-achieving students study in programs that emphasize accelerated learning and creativity through expanded academic experiences.

Rank refers to ordering the transiency and stability rates for schools listed in Tables 2 through 5, with the highest rate being assigned rank 1. Each table contains unique rankings within its pattern that cannot be directly compared to other years' rankings. Table 1 gives region rankings.

PROCEDURES

Two changes in procedures initiated in 1978-79 were continued for this report. The format was changed to include magnet programs, and calculation of the 12-month transiency equivalence was discontinued. The formulas and their factors are explained as follows:

Symbols Used

E — number of entrants for year: this includes all E2, E3, E4, E5, and E7 students for school months 2-10; excludes all Es in month 1; excludes all E1 students for months 2-10.

L — number of leavers for year (school months 1-10; includes L1 through L5, and L7-L8).

AL — adjusted number of leavers for year: this includes all L2, L3, L4, L5, and L8 students for school months 2-10; excludes all Ls in month 1; excludes all L1 and L7 for months 2-10.

M1 — 1st school-month enrollment

M6 — 6th school-month enrollment

S — school-year stability rate

T — school-year transiency rate

Formula for Stability

Stability equals 1st school-month enrollment less number of leavers divided by 1st school-month enrollment, times 100 -- yielding a percentage term.

$$S = \frac{M1 - L}{M1} \times 100$$

Formula for Transiency

Transiency equals number of entrants, plus adjusted number of leavers divided by sum of enrollment for 1st and 6th school months divided by 2, times 100 -- yielding a percentage term.

$$T = \frac{E + AL}{(M1 + M6)/2} \times 100$$

Noteworthy changes in the new transiency formula include these:

- All Es and Ls in school month 1 are excluded from consideration because they are already part of the derived enrollment for the 1st school month.
- The concept of factoring out the articulated E2s from the 1st month's total of E2s ("SE2" in the 1981-82 formula) no longer enters into the calculation of transiency since no Es and Ls are considered during the 1st school month except as baseline enrollment.
- The average of the 2 peak months for enrollment will be used rather than the sum of the 2. As soon as programming allows, the formula will be further refined to incorporate the mean of enrollment for all 10 school months as the denominator.

FINDINGS

Overview results for the district appear in Table 1, and results for each school are presented in Tables 2-5. Rates for transiency and stability since 1968 are shown in Tables 6-7. The 1982-83 figures do not appear here because they should not be directly compared with former years.

There was a small decline in the stability factor from 1978-79 to 1980-81, from 76.6% to 74.1%, with noteworthy improvements the next 2 years (Table 7).

The overall transiency figure for 1982-83 is 39.1% by the new formula, not directly comparable with past transiency rates. This marks a new baseline for comparing future rates.

SUGGESTED APPLICATIONS

This report is one of several published annually by t Research and Evaluation Branch that LAUSD staff can add to their information base for determining the educational needs of students. Data included in the series of transiency and stability studies have been used in establishing clerical norms for schools, assessing student needs in applications for specially funded programs, and providing information to the public.
